Rust and corrosion cost American metal parts manufacturers an estimated 360 billion dollars per year! Is rust on your automotive parts a never-ending problem? Are your customers complaining about rust? Are you spending money on expensive sand-blasting or other rust removal processes? If so, you owe it to yourself (and your bottom line) to contact Green Packaging, Inc. We will solve your rust problems once and for all.

Many of the world's leading Tier 1 and Tier 2 automotive parts manufacturers rely on VCI products from Green Packaging, Inc. to protect their parts from rust and corrosion.

The experts at Green Packaging, Inc. have solved corrosion and rust problems for some of the largest automotive parts manufacturers in the world. Our customers include global manufacturers like BorgWarner, Cummins, Parker-Hannifin, Eaton, TRW Automotive, Continental Automotive, Dana Corporation, ThyssenKrupp Crankshafts, Federal Mogul, and many, many more. If these world-class manufacturers rely on Green Packaging, Inc., shouldn't you?

Whether you are producing brake rotors or engine valves, fuel systems or emission products, transmissions or camshafts, shocks or springs, water pumps or engine blocks, or any other type of metal automotive part, we have the correct VCI products to protect your valuable parts from rust and corrosion. Our proprietary VCI formulation is extremely effective on all types of metal automotive parts. We have the correct VCI products that will offer your parts premium protection from rust and corrosion.

Green Packaging, Inc. specializes in solving complex corrosion and rust problems for our customers. We will do the same for you by consulting with you and developing a powerful, specific corrosion inhibiting system for your unique application.

We offer state-of-the-art accelerated corrosion testing in our lab at no charge. Call today for your free corrosion consultation, samples, or a price quotation on all of your VCI packaging requirements.
