

Green Packaging, Inc.

Anti-Corrosion Packaging Solutions

A Recognized Leader
in the Field of Anti-Corrosion Packaging

Gas and Oil Well Industry

The oil and natural gas industry has been a bright spot in the last few years of sluggish economic growth. Our global economy could not function without the oil and gas industry enabling it to extract and refine petroleum. This industry is helping to spur more economic growth in America's manufacturing sector. Oil and gas drilling requires special machinery, which is exposed to extreme weather conditions, such as dramatic changes in temperature, high humidity levels, and other environmental factors that potentially cause rust and corrosion. The metal components and parts designed for these type of machines, and the equipment itself, can be protected from rust and corrosion by the proper use of VCI products.

Green Packaging, Inc. specializes in solving rust problems for the gas and oil well industry using VCI paper and VCI bags. Our proprietary VCI formulation is extremely effective on all metal parts. No matter what type of parts you are producing, our VCI paper will provide premium protection against rust and corrosion. At Green Packaging, Inc. we offer state-of-the-art accelerated corrosion testing in our lab at no charge. We also offer free samples of our VCI products to prove how well they will work for you.

If you are experiencing ANY type of rust issues on your metal parts or tooling for drilling machinery and equipment, you should call us today **toll-free 1-855-4-NO-RUST (1-855-466-7878)** for a free corrosion consultation, samples, or a price quotation for all of your anti-corrosion packaging needs.
