

Green Packaging, Inc.

Anti-Corrosion Packaging Solutions

A Recognized Leader
in the Field of Anti-Corrosion Packaging

Precision Machine Shops

The experts at Green Packaging, Inc. have solved corrosion and rust problems for many of the leading machine shops all over the country. We specialize in solving complex corrosion issues in machined parts.

Our VCI paper and VCI bags are very effective in preventing corrosion and rust on precision machined parts. You spend a lot of time and effort turning, drilling, tapping and milling to create parts that have extremely close tolerances. Why let corrosion and rust ruin all of your hard work. Our VCI products will eliminate rust and corrosion on all machined surfaces.

Whether you are machining parts from castings, bar stock, tubing, or any other metal stock, our VCI will prevent corrosion and rust. Our VCI products prevent corrosion on steel as well as all non-ferrous metals.

In addition to providing outstanding corrosion prevention, our VCI products have many more benefits:

- Very Economical, easy to use
- Environmentally-Friendly
- No need for messy oils and greases
- Your customers will receive their parts clean, dry and corrosion free
- No need to remove any oils from their parts

We offer state-of-the-art accelerated corrosion testing in our lab at no charge.
