

Green Packaging, Inc.

Anti-Corrosion Packaging Solutions

A Recognized Leader
in the Field of Anti-Corrosion Packaging

Sintered Metals

- Is rust on your powdered metal parts a never-ending problem?
- Are your customers calling to complain about rust on their parts?
- Are you spending lots of time and money re-sintering rusty parts?
- Or are you sand-blasting or acid washing rusty parts?

All of these rust removal processes are expensive and time consuming, and they are eating into your bottom line. Wouldn't it be a better, more natural choice to PREVENT the rust in the first place rather than deal with it later? The experts at Green Packaging, Inc. have solved complex rust problems for many of the country's leading powdered metal parts manufacturers, and we would love to have the opportunity to do the same for you.

Green Packaging, Inc. specializes in solving rust problems for powdered metal parts manufacturers using VCI paper and VCI bags. We even have a VCI paper that is specifically designed to protect powdered metal parts from rust and corrosion.

Our proprietary VCI formulation is extremely effective on powdered metal parts. No matter what type of P/M parts you are producing, our VCI paper will provide premium protection against rust and corrosion. At Green Packaging, Inc. we offer state-of-the-art accelerated corrosion testing in our lab at no charge. We also offer free samples of our VCI products to prove how well they will work for you.

If you are experiencing ANY type of rust issues on your P/M parts, you should call us today **toll-free 1-855-4-NO-RUST (1-855-466-7878)** for a free corrosion consultation, samples, or a price quotation for all of your anti-corrosion packaging needs.
