

Green Packaging, Inc.

Anti-Corrosion Packaging Solutions

A Recognized Leader
in the Field of Anti-Corrosion Packaging

Foundry and Metalcasting

Is rust on your castings a never-ending problem? Are your customers complaining about rust? Are you spending money on expensive sand-blasting or other rust removal processes? If so, you owe it to yourself (and your bottom line) to contact Green Packaging, Inc. We can solve your rust problems once and for all.

The experts at Green Packaging have solved corrosion problems for some of the largest foundries and metalcasters in the country. We specialize in solving complex corrosion problems in castings and forgings.

Whether you are producing castings of ductile iron, grey iron, austempered iron, white iron, malleable iron, or any other ferrous or non-ferrous alloys, we have the correct VCI products to protect your valuable castings from rust and corrosion.

We will consult with you to develop a powerful, specific corrosion inhibiting system for your unique application.

Our proprietary VCI formulation is extremely effective on castings. Whether you are producing castings or forgings, ferrous or non-ferrous, one pound or 100,000 pounds, we have the VCI that will offer your parts premium protection from rust and corrosion.

We offer state-of-the-art accelerated corrosion testing in our lab at no charge.

Call today for your free corrosion consultation, samples, or a price quotation on all of your VCI packaging requirements.
